

Cigar Box Guitar Wall Hanger Assembly Instructions

Product #90-044-01

Are you tired of leaning your cigar box guitars on any old surface, hoping they don't fall over? Wouldn't life be less cluttered and more satisfying if you could keep your CBGs off the floor and displayed on your wall with pride?

Now you have the perfect solution: this kit allows you to assemble your own stylized, 100% wood, American-made, cigar box guitar wall hanger.

As shown in the photo to the right, this kit includes:

- A. The stylized wallhanger face**
- B. The back brace**
- C. Two support arms**
- D. Two rectangular insert connectors**

Assembly Instructions

Lay the back brace on your work surface with the round mounting holes above the rectangular holes, as shown in the photo to the right.

Now insert the rectangular connectors into the holes in the back brace. They should fit fairly snugly when inserted correctly, and part of the rectangular connectors should extend above the surface as shown.

Press the wall hanger faceplate onto the back brace by guiding the rectangular connectors into the rectangular holes in the face.

It is a good idea at this point to use some wood glue to secure the above pieces (back brace, rectangular connectors and faceplate) together securely.

Using just enough force to open them enough to get them over the face plate, mount the arms onto the face. **Be careful not to bend them too much or they will break!**

The square nubs on the back of the support arms can be set into any one of the holes in the faceplate.

The arms can be offset to accommodate CBG headstocks with offset tuners. At this point you can apply a finish to your hanger if desired. Adding some felt, adhesive cork or other padding to the inside curve of the arms (which touch the guitar headstock) can be a nice touch.

Mount the wall hanger onto your preferred surface.

It's always best to anchor your wall hanger into something secure like a wall stud.

Use sheet rock wall anchors where necessary to ensure a secure mount.

Now hang your cigar box guitar with pride!

Please note: this wall hanger is meant for hanging instruments up to about 5 pounds, with 1.5" wide headstocks. It may not be able to support heavier instruments or ones with tapered, wider headstocks.

Please use discretion when deciding what to hang on these, and remember that while strong, there is only so much that 1/4" thick plywood can do.
